

Bernardo Raposo.

Engineering Manager & Hands-On Frontend Technical Leader

Harrogate, North Yorkshire hi@bernardoraposo.com [linkedin.com/in/braposo](https://www.linkedin.com/in/braposo) github.com/braposo noti.st/braposo
UK Settled Status – no sponsorship required

PROFILE

Hands-on engineering leader with 15+ years building and evolving large-scale, customer-facing web platforms, including 5 years as Engineering Manager at SingleStore and platform rewrites for one of the UK’s largest eCommerce travel groups. I work as a player-coach: setting frontend architecture and standards, writing technical vision documents and decision records, and staying close to the code through reviews and prototypes while coaching and growing engineers. Deep expertise in React, Node.js, TypeScript, SPA architecture, performance optimisation, and design systems — with a strong track record of analysing legacy codebases and leading multi-year platform modernisation programmes.

EXPERIENCE

Engineering Manager / SingleStore Aug 2020 – May 2026
Remote · US-headquartered database company; globally distributed teams

- Led the Web team owning singlestore.com, the documentation platform, CMS infrastructure, and customer-facing AI products. Acted as both line manager and technical authority — hiring, coaching and promoting engineers.
- Drove two major replatformings: migrated marketing surfaces from Netlify to a headless CMS, then owned the platform vision and roadmap for the next generation (Next.js + Sanity, module-based architecture), aligning Web, Marketing, Docs and Product on a shared direction.
- Led the Docs v2 replatforming end-to-end: new frontend, Algolia search, performance work and deployment infrastructure for a platform treated internally as a primary acquisition channel (SEO drives ~45% of traffic).
- Owned cross-surface performance, security and infrastructure: CloudFront/Lambda behaviour, redirects, vulnerability remediation, analytics/consent — embedding these concerns into standards and code review.
- Shipped SQRL, the company’s AI assistant (3,000+ sessions/month across web, docs and cloud portal), and one of the first MCP server integrations among database companies — owning auth, transport and security hardening.
- Led the March 2026 company-wide AI hackathon; established AI-assisted engineering practices within the team.

Principal Engineer / TravelRepublic (Emirates Group) 2018 – 2020
London · High-traffic B2C eCommerce (millions in bookings/month)

- Lead engineer on a full platform rewrite of one of the UK’s main online travel agencies — a mobile-first Next.js PWA shared across three brands (TravelRepublic, Emirates Holidays, Dnata Travel), serving many thousands of daily visitors.
- Built the shared React design system and the GraphQL API layer connecting the frontend to booking and inventory systems; drove SPA performance, caching and rendering optimisation for a conversion-critical eCommerce funnel.
- Raised engineering standards across the group: code quality, best practices and architecture within a large, distributed enterprise organisation.

Senior Engineer / EDITED (retail analytics) 2014 – 2018
London · Employee #25; scaled with the company from 25 to ~200 people

- Built core features of a complex React data-analytics product for major retailers; created the company’s design system from scratch with the design team.
- Moved into owning the public website experience end-to-end — early evidence of a career-long pattern of working across engineering, design and marketing.

Earlier: Founder, Connect Coimbra (profitable coworking business, 2010–14) · Junior Engineer, Critical Software (health tech, 2009–10)

CORE SKILLS

Frontend · React, Next.js, TypeScript, Node.js, GraphQL, SPA/PWA architecture, design systems, Storybook, micro-frontend & modular patterns
Performance & quality · Core Web Vitals, rendering & caching strategies (client/edge/CDN), SEO, CI/CD, observability, code review standards
Platform · AWS (CloudFront, Lambda), headless CMS, Algolia search, analytics & consent
Leadership · Line management, hiring, promotions, architectural documentation, cross-functional delivery with Product, Design & Marketing
AI engineering · LLM-powered products, MCP servers, AI-assisted development practices

EDUCATION & BEYOND

- MSc & BSc in Informatics Engineering — University of Coimbra, Portugal.
- Open-source author (1,500+ GitHub stars) and international conference speaker — React Advanced London, GraphQL Conf, Design Systems London, Solana Breakpoint.
