PROFILE

Hands-on engineering leader, 15+ years building customer-facing web platforms at scale. Five years as Engineering Manager at SingleStore, owning the web platform and our customer-facing AI products.

I work as a player-coach. I set architecture and standards, write the vision documents, and stay close to the code through reviews and prototypes. Most of my attention now goes on where AI belongs in a product, and on how engineering teams work alongside it.

EXPERIENCE

- Engineering Manager · SingleStore** Aug 2020 – May 2026
Remote · US-headquartered database company, globally distributed teams
 - Led the Web team owning singlestore.com, the documentation platform, CMS infrastructure and customer-facing AI products. Line manager and technical authority: hiring, coaching, and writing promotion cases.
 - Drove the replatformings, then owned the platform vision for the next generation (Next.js and Sanity, module-based), aligning Web, Marketing, Docs and Product behind one direction.
 - Shipped **SQL**, the company's AI assistant, across the website, docs and cloud portal, built on retrieval over generation so nothing hallucinated reached a customer. Also one of the first MCP servers among database companies, owning auth, transport and security.
 - Led the Docs v2 replatforming end to end: new frontend, Algolia search and performance work, for a platform treated internally as a primary acquisition channel (SEO drives ~45% of traffic).
 - Ran the company-wide AI hackathon in March 2026 and established AI-assisted engineering practices inside the team.
- Principal Engineer · TravelRepublic (Emirates Group)** 2018 – 2020
London · High-traffic B2C ecommerce, millions in bookings a month
 - Lead engineer on a full platform rewrite for one of the UK's main online travel agencies. A mobile-first Next.js PWA shared across three brands (TravelRepublic, Emirates Holidays, Dnata Travel), serving many thousands of daily visitors.
 - Built the shared React design system and the GraphQL layer connecting the frontend to booking and inventory systems. Drove SPA performance, caching and rendering for a conversion-critical funnel.
 - Raised engineering standards across the group: code quality, practices and architecture inside a large, distributed enterprise.
- Senior Engineer · EDITED** 2014 – 2018
London · Retail analytics · One of the first engineers, there from 25 to around 200 people
 - Built core features of a complex React data-analytics product for major retailers, and created the design system from scratch with the design team.
 - Moved into owning the public website end to end, early evidence of the cross-functional pattern that has run through my career.
- Earlier: Founder, Connect Coimbra, a coworking business (2010 – 2014). Junior Engineer, Critical Software, health tech (2009 – 2010).

BUILT RECENTLY

Fit (fit.bernardoraposo.com). A tool I built to run my own job search. Paste a job description and it gives an honest read of where I fit, on a permalink I can share. It drafts cover letters and application answers too. I directed it and made the architecture calls; an agent wrote most of the code. Vercel, Redis and the Anthropic API, no frontend framework.

The Hermans Club (hermans.club). A side project and a testing ground. It is a single-human company, and I am working out how far AI can go across marketing, sales, engineering and design. I run Paperclip alongside Hermes and other agentic tools.

CORE SKILLS

- Frontend** · React, Next.js, TypeScript, Node.js, GraphQL, SPA and PWA architecture, design systems, Storybook, modular patterns
- AI engineering** · LLM-powered products, MCP servers, retrieval over generation, agent architectures, AI-assisted development practices
- Performance & quality** · Core Web Vitals, rendering and caching strategies (client, edge, CDN), SEO, CI/CD, observability, code review standards
- Platform** · AWS (CloudFront, Lambda), headless CMS, Algolia search, analytics and consent
- Leadership** · Line management, hiring, promotions, architectural documentation, cross-functional delivery with Product, Design and Marketing

EDUCATION & BEYOND

MSc and BSc in Informatics Engineering, University of Coimbra, Portugal.

Open-source author of libraries people actually use, and an international conference speaker: React Advanced London, GraphQL Conf, Design Systems London, Solana Breakpoint.
